Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT   New isolated prostate-derived nucleic acids - used to develop products
PT   which may have cytokine, immune regulatory, haematopoiesis regulating,
PT   anti-inflammatory or tumour inhibition activity.
XX
PS   Claim 1; Page 298; 675pp; English.
XX
CC   AAX40438 to AAX40715 represent 5' expressed sequence tags (ESTs) for
CC   human secreted proteins expressed in prostate, and encode the proteins
CC   given in AAY11716 to AAY11993 respectively. The proteins given represent
CC   the signal peptide and an N-terminal fragment of a secreted protein. The
CC   nucleic acid sequences can be used for producing secreted human gene
CC   products. They can also be used to develop products for diagnosis and
CC   therapy. The proteins obtained may have cytokine activity, cell
CC   proliferation and differentiation activity, haematopoiesis regulating
CC   activity, tissue growth regulating activity, reproductive hormone
CC   regulating activity, chemotactic/chemokinetic activity, haemostatic and
CC   thrombolytic activity, receptor/ligand activity, anti-inflammatory
CC   activity, tumour inhibition activity or other activities. The products
CC   can be used in forensic, gene therapy and chromosome mapping procedures.
CC   The sequences can also be used for obtaining corresponding promoter
CC   sequences. The nucleic acids encoding the signal peptides can be used for
CC   directing extracellular secretion of a polypeptide or the insertion of a
CC   polypeptide into a membrane, or importing a polypeptide into a cell

PT   Colon cancer associated gene sequences, referred to as colon cancer
PT   antigens, useful for the treatment, prevention, and diagnosis of colon
PT   disorders such as colon cancer.
XX
PS   Claim 1; Page 597; 2104pp; English.
XX
CC   AAC97991 to AAC98763 encode the human colon cancer associated proteins,
CC   called human colon cancer antigens, given in AAB53234 to AAB54006. The
CC   human colon cancer antigens can have cytostatic, cardioactive, muscular;
CC   neuroprotective, immunomodulatory, gynaecological, gastrointestinal,
CC   vulnerary, nephrotropic, antiinfective and antibacterial activities, and
CC   can be used in gene therapy. The colon cancer antigen polynucleotides,
CC   proteins and antibodies to the proteins are useful for the prevention,
CC   treatment and diagnosis of colon disorders, such as colon cancer. The
CC   polynucleotides may be used in diagnostics and research, such as for
CC   chromosome identification, and as hybridisation probes. The proteins may
CC   also be used to prevent diseases such as neural disorders, immune system
CC   disorders, muscular disorders, reproductive disorders, gastrointestinal
CC   disorders, wounds, renal disorders, infectious diseases, and
```

```
CC   cardiovascular disorders. AAC98764 to AAC98772 and AAB54007 represent

XX
PT   Novel proteins used to treat inflammatory diseases, NF-kappaB related
PT   diseases and for improvement of anti-tumor treatments.
XX
PS   Claim 9; Page 37-39; 48pp; English.
XX
CC   This sequence represents the gene encoding human CD40 receptor associated
CC   protein (CRAP). CRAP is a functional protein capable of interacting with
CC   the cytoplasmic domain of CD40 and/or other receptors of the tumour
CC   necrosis factor (TNF) receptor superfamily such as CD30 and TNF receptor
CC   I, where the protein has no homology to TNF receptor associated factor
CC   (TRAF)-proteins. The CD40 binding proteins can be used as modulators of
CC   the CD40 signalling pathway, especially to diagnose and treat TRAF-
CC   related, CD40-related, NF-kappaB related and/or Jun (kinase)-related
CC   diseases, and for the improvement of anti-tumour diseases. Diseases which
CC   may be treated include atherosclerosis, arthritis, multiple sclerosis,
CC   systemic lupus erythematosus, graft rejection, graft versus host disease,
CC   allergy, and autoimmune disease. The proteins can be used to sensitize
CC   tumour cells to anti-tumour treatments and to screen for compounds which
CC   interfere with the interaction of the proteins with other protein
CC   components of the TRAF, CD40 or NF-kappaB related pathway

XX
CC This invention relates to novel human genes and gene product which are
CC implicated in certain disease states. Compounds which modulate the
CC proteins of the invention may have cytostatic, antiinflammatory,
CC ophthalmological, antiarteriosclerotic or vulnerary activities. The
CC sequences of the invention may be useful for gene therapy. The invention
CC may be useful for diagnosing or treating a hypoxia-regulated condition,
CC such as tumourigenesis, angiogenesis, apoptosis, inflammation,
CC erythropoiesis, or the biological response to hypoxia conditions
CC including processes such as glycolysis, gluconeogenesis, glucose
CC transportation, catecholamine synthesis, iron transport or nitric oxide
CC synthesis. The disease includes cancer, ischaemic conditions, reperfusion
CC injury, retinopathy, neonatal stress, pre-eclampsia, atherosclerosis,
CC inflammatory conditions or wound healing. The present sequence is that of
CC a disease related protein encoding DNA sequence of the invention.

PT New PRO polypeptides and polynucleotides, useful for treating e.g.
PT erythematosus, rheumatoid arthritis, diabetes mellitus, immune-mediated
PT renal disease, or demyelinating diseases of the central or peripheral
PT nervous system.
XX
PS Claim 1; SEQ ID NO 475; 2940pp; English.
XX
CC The invention relates to a novel isolated nucleic acid and the PRO
CC polypeptide encoded by it. A protein of the invention has
CC antiinflammatory, antiarthritic, antirheumatic, immunosuppressive,
CC osteopathic, antidiabetic, dermatological, antipsoriatic, antiallergic,
CC antiasthmatic, hepatotropic, and respiratory activity. A polynucleotide
CC of the invention may have a use in gene therapy. The PRO polypeptide, its
CC agonist, antagonist, or antibody that specifically binds to the
CC polypeptide is useful for treating an immune related disorder such as
CC systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis,
CC juvenile chronic arthritis, a spondyloarthropathy, systemic sclerosis, an
CC idiopathic inflammatory myopathy, Sjogren's syndrome, systemic
CC vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune
CC thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal
CC disease, a demyelinating disease of the central or peripheral nervous
CC system, idiopathic demyelinating polyneuropathy, Guillain-Barre syndrome,
CC a chronic inflammatory demyelinating polyneuropathy, a hepatobiliary
CC disease, infectious or autoimmune chronic active hepatitis, primary
CC biliary cirrhosis, granulomatous hepatitis, sclerosing cholangitis,
CC inflammatory bowel disease, gluten-sensitive enteropathy, Whipple's
CC disease, an autoimmune or immune-mediated skin disease, a bullous skin
CC disease, erythema multiforme, contact dermatitis, psoriasis, an allergic
CC disease, asthma, allergic rhinitis, atopic dermatitis, food
CC hypersensitivity, urticaria, an immunologic disease of the lung,
CC eosinophilic pneumonia, idiopathic pulmonary fibrosis, hypersensitivity
CC pneumonitis, a transplantation associated disease, graft rejection or
CC graft-versus-host disease. The present sequence encodes a PRO protein of
CC the invention.

PT   Biomarkers useful for predicting or determining the response of a mammal
PT   to a cancer treatment comprising administration of a modulator of cyclin-
PT   dependent kinase activity.
XX
PS   Claim 5; SEQ ID NO 921; 141pp; English.
XX
CC   This invention describes a novel method of predicting or determining
CC   whether a mammal will respond or is responding to an anti-cancer agent
CC   that modulates cyclin-dependent kinase (cdk) activity. The method
CC   comprises measuring the level of one or more biomarkers selected from
CC   2774 biomarkers given in the specification (nucleotide sequence SEQ ID
CC   NO:1246 (Genbank EST W28729) is especially preferred). The method of the
CC   invention is utilized in a kit for determining or predicting whether
CC   patient would be susceptible or resistant to treatment by an agent
CC   modulating cdk activity. The invention also describes a method for
CC   utilizing individualized genetic profiles for treating diseases and
CC   disorders based on patient's response and molecular level, specialized
CC   microarrays comprising the biomarkers described, antibodies directed
CC   against the biomarkers and a cell culture model to identify biomarkers.
CC   The cdk modulator is preferably N-5-[[5-(1,1-Dimethylethyl)-2-
CC   oxazolyl]methyl]thio]-2-thiazolyl-4-piperidine carboxamide, 0.5-L-
CC   tartaric acid salt. Note: The sequence data for this patent did not form
CC   part of the printed specification, but was obtained in electronic format
CC   directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. This
CC   sequence encodes a biomarker used in the method of the invention.

PT Novel nucleic acids and polypeptides, useful for treating disorders such
PT as central nervous system injuries.
XX
PS Claim 1; SEQ ID NO 1200; 10078pp; English.
XX
CC The invention relates to human nucleic acids (AAI57798-AAI61369) and the
CC encoded polypeptides (AAM38642-AAM42213) with nootropic,
CC immunosuppressant and cytostatic activity. The polynucleotides are useful
CC in gene therapy. A composition containing a polypeptide or polynucleotide
CC of the invention may be used to treat diseases of the peripheral nervous
CC system, such as peripheral nervous injuries, peripheral neuropathy and
CC localised neuropathies and central nervous system diseases, such as
CC Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic
CC lateral sclerosis, and Shy-Drager Syndrome. Other uses include the
CC utilisation of the activities such as: Immune system suppression,
CC Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic
CC and thrombolytic activity, cancer diagnosis and therapy, drug screening,
CC assays for receptor activity, arthritis and inflammation, leukaemias and
CC C.N.S disorders. Note: The sequence data for this patent did not form
CC part of the printed specification

PT New G-protein-coupled receptor-like polypeptides and polynucleotides,
PT useful for treating diseases of ophthalmic, neurological, immunological
PT and nephritic systems and hormonal dysfunction, cancer, atherosclerosis
PT and diabetes.
XX
PS Example 2; SEQ ID NO 889; 92pp; English.
XX
CC The invention describes an isolated polynucleotide (I) comprising a fully
CC defined (SI) of 749, 3188, 2484, 1169, 2936, 1467, 5773, 5714, 4041,
CC 1372, 3996, 3945, 2735, 1788, 585, 1782, 927, 5714 or 2282 nucleotides as
CC given in the specification, its translated or protein coding portion, its
CC extracellular portion or its active domain. The GPCR-like polypeptides
CC and polynucleotides are useful for the treatment of diseases of
CC ophthalmic, neurological, immunological and nephritic systems. They may
CC also be used to treat hormonal dysfunction, cancer, atherosclerosis and
CC diabetes. The antibodies are useful for detecting or quantitating the
CC polypeptide in tissue. The polypeptides can also be used as molecular
CC weight markers and as a food supplement. This sequence represents a human
CC polynucleotide of the invention.

PT   Novel nucleic acids and polypeptides, useful for treating disorders such
PT   as central nervous system injuries.
XX
PS   Claim 1; SEQ ID NO 4772; 10078pp; English.
XX
CC   The invention relates to human nucleic acids (AAI57798-AAI61369) and the
CC   encoded polypeptides (AAM38642-AAM42213) with nootropic,
CC   immunosuppressant and cytostatic activity. The polynucleotides are useful
CC   in gene therapy. A composition containing a polypeptide or polynucleotide
CC   of the invention may be used to treat diseases of the peripheral nervous
CC   system, such as peripheral nervous injuries, peripheral neuropathy and
CC   localised neuropathies and central nervous system diseases, such as
CC   Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic
CC   lateral sclerosis, and Shy-Drager Syndrome. Other uses include the
CC   utilisation of the activities such as: Immune system suppression,
CC   Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic
CC   and thrombolytic activity, cancer diagnosis and therapy, drug screening,
CC   assays for receptor activity, arthritis and inflammation, leukaemias and
CC   C.N.S disorders. Note: The sequence data for this patent did not form
CC   part of the printed specification

PS   Claim 1; SEQ ID NO 88; 231pp; English.
XX
CC   The invention relates to a combination comprising cDNAs that are
CC   differentially expressed in colon disorder. The methods and compositions
CC   of the present invention are useful for diagnosing, treating, staging or
CC   monitoring treatment for colon cancer. They are also useful in high
CC   throughput methods for using cDNAs to detect differential expression of
CC   nucleic acids in a sample, screening molecules or compounds to identify a
CC   ligand which specifically binds a cDNA and using a protein to screen
CC   molecules or compounds to identify at least one ligand which specifically
CC   binds the protein. The present sequence represents a human cDNA
CC   differentially expressed in colon cancer.

PT   Primer sets for synthesizing polynucleotides, particularly the 5602 full-
PT   length cDNAs defined in the specification, and for the detection and/or
PT   diagnosis of the abnormality of the proteins encoded by the full-length
PT   cDNAs.
XX
PS   Claim 1; SEQ ID NO 4908; 2537pp + Sequence Listing; English.
XX
CC   The present invention describes primer sets for synthesising 5602 full-
CC   length cDNAs defined in the specification. Where a primer set comprises:
CC   (a) an oligo-dT primer and an oligonucleotide complementary to the
CC   complementary strand of a polynucleotide which comprises one of the 5602
CC   nucleotide sequences defined in the specification, where the
CC   oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC   of an oligonucleotide comprising a sequence complementary to the
CC   complementary strand of a polynucleotide which comprises a 5'-end
CC   sequence and an oligonucleotide comprising a sequence complementary to a
CC   polynucleotide which comprises a 3'-end sequence, where the
CC   oligonucleotide comprises at least 15 nucleotides and the combination of
CC   the 5'-end sequence/3'-end sequence is selected from those defined in the
CC   specification. The primer sets can be used in antisense therapy and in
CC   gene therapy. The primers are useful for synthesising polynucleotides,
CC   particularly full-length cDNAs. The primers are also useful for the
CC   detection and/or diagnosis of the abnormality of the proteins encoded by
CC   the full-length cDNAs. The primers allow obtaining of the full-length
CC   cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC   AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
CC   represent human amino acid sequences; and AAH13629 to AAH13632 represent
CC   oligonucleotides, all of which are used in the exemplification of the
CC   present invention

PS Claim 8; SEQ ID NO 13209; 2537pp + Sequence Listing; English.
XX
CC The present invention describes primer sets for synthesising 5602 full-
CC length cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the
CC complementary strand of a polynucleotide which comprises one of the 5602
CC nucleotide sequences defined in the specification, where the
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprising a sequence complementary to the
CC complementary strand of a polynucleotide which comprises a 5'-end
CC sequence and an oligonucleotide comprising a sequence complementary to a
CC polynucleotide which comprises a 3'-end sequence, where the
CC oligonucleotide comprises at least 15 nucleotides and the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC specification. The primer sets can be used in antisense therapy and in
CC gene therapy. The primers are useful for synthesising polynucleotides,
CC particularly full-length cDNAs. The primers are also useful for the
CC detection and/or diagnosis of the abnormality of the proteins encoded by
CC the full-length cDNAs. The primers allow obtaining of the full-length
CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
CC represent human amino acid sequences; and AAH13629 to AAH13632 represent
CC oligonucleotides, all of which are used in the exemplification of the
CC present invention

XX
PS Claim 1; SEQ ID NO 826; 87pp; English.
XX
CC The invention relates to polynucleotide and polypeptide sequences
CC associated with cancer, particularly colon cancer. Also disclosed are (i)
CC an expression vector comprising the polynucleotide, (ii) a host cell
CC transformed or transfected with the expression vector, (iii) an isolated
CC antibody, or its antigen-binding fragment, which specifically binds to
CC the polypeptide, (iv) a method of detecting or determining the presence
CC of cancer in a patient, (v) a fusion protein comprising at least one of
CC the polypeptides, (vi) an oligonucleotide that hybridises to the
CC polynucleotide sequence under highly stringent conditions, and (vii) a
CC method of stimulating and/or expanding T cells specific for a tumour
CC protein. The polypeptide specifically comprises the amino acid sequence
CC of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
CC frames (ORFs) of C636S. These polypeptides are encoded by the
CC polynucleotide sequences, where both are capable of eliciting a humoral
CC and/or cellular immune response. The polynucleotides, polypeptides, and
CC antibodies are useful for diagnosing, preventing or treating cancer,
CC particularly colon cancer. The polynucleotide and polypeptide sequences
CC are also useful in DNA strand invasion, antisense inhibition, mutational
CC analysis, nucleic acid purification, isolation of transcriptionally
CC active genes, blocking or transcription factor binding, genome cleavage
CC or in situ hybridisation, and as enhancers of transcription or
CC biomarkers. This sequence represents a human colon cancer associated
CC cDNA. Note: The sequence data for this patent was obtained in electronic
CC format directly from the USPTO web site at seqdata.uspto.gov

PS   Claim 1; SEQ ID NO 22059; 103pp; English.
XX
CC   The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC   sequences. (I) is useful as hybridisation probes, polymerase chain
CC   reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC   and in recombinant production of (II). The polynucleotides are also used
CC   in diagnostics as expressed sequence tags for identifying expressed
CC   genes. (I) is useful in gene therapy techniques to restore normal
CC   activity of (II) or to treat disease states involving (II). (II) is
CC   useful for generating antibodies against it, detecting or quantitating a
CC   polypeptide in tissue, as molecular weight markers and as a food
CC   supplement. (II) and its binding partners are useful in medical imaging
CC   of sites expressing (II). (I) and (II) are useful for treating disorders
CC   involving aberrant protein expression or biological activity. The
CC   polypeptide and polynucleotide sequences have applications in
CC   diagnostics, forensics, gene mapping, identification of mutations
CC   responsible for genetic disorders or other traits to assess biodiversity
CC   and to produce other types of data and products dependent on DNA and
CC   amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
CC   coding sequences of the invention. Note: The sequence data for this
CC   patent did not appear in the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Novel proteins used to treat inflammatory diseases, NF-kappaB related
PT   diseases and for improvement of anti-tumor treatments.
XX
PS   Claim 10; Page 41-43; 48pp; English.
XX
CC   This sequence represents the gene encoding mouse CD40 receptor associated
CC   protein (CRAP). CRAP is a functional protein capable of interacting with
CC   the cytoplasmic domain of CD40 and/or other receptors of the tumour
CC   necrosis factor (TNF) receptor superfamily such as CD30 and TNF receptor
CC   I, where the protein has no homology to TNF receptor associated factor
CC   (TRAF)-proteins. The CD40 binding proteins can be used as modulators of
CC   the CD40 signalling pathway, especially to diagnose and treat TRAF-
CC   related, CD40-related, NF-kappaB related and/or Jun (kinase)-related
CC   diseases, and for the improvement of anti-tumour diseases. Diseases which
CC   may be treated include atherosclerosis, arthritis, multiple sclerosis,
CC   systemic lupus erythematosus, graft rejection, graft versus host disease,
CC   allergy, and autoimmune disease. The proteins can be used to sensitize
CC   tumour cells to anti-tumour treatments and to screen for compounds which
CC   interfere with the interaction of the proteins with other protein
CC   components of the TRAF, CD40 or NF-kappaB related pathway

PT Array containing probes for genes involved in mitochondrial biology,
PT useful for determining mitochondrial biology gene expression profiles for
PT use in diagnosing pathologies and identifying biochemical pathways.
XX
PS Claim 2; SEQ ID NO 2154; 201pp; English.
XX
CC The invention relates to a novel array comprising at least two isolated
CC nucleotide molecules, each molecule having a sequence capable of uniquely
CC hybridising to a nucleic acid molecule which is an expression product of
CC a gene involved in mitochondrial biology. The array comprises two or more
CC isolated nucleic acid molecules or spots, each molecule having a sequence
CC chosen from sequence of 994 human probes and 2046 mouse probes. An array
CC of the invention is useful for determining an expression profile of a
CC mouse or human sample containing nucleic acid, by contacting the array
CC with the sample under conditions allowing selective hybridisation, and
CC measuring hybridisation of nucleic acid in the sample to the array to
CC produce an expression profile. The array is also useful for determining
CC an expression profile of a first labelled sample containing nucleic acid
CC relative to a second, differently labelled sample containing nucleic
CC acid. The second sample is a reference or a standard. An array is useful
CC for determining an expression profile diagnostic of an energy-metabolism-
CC related physiological condition. An array of the invention is useful for
CC determining mitochondrial biology gene expression profiles of organisms,
CC such as human, mice and closely related species, tissue and organs of
CC such organisms, which are useful for determining expression profiles
CC diagnostic of energy metabolism-related physiological conditions,
CC diagnosing such physiological conditions, identifying biochemical
CC pathways, genes, and mutations involved in such physiological conditions,
CC identifying therapeutic agents useful for preventing and/or treating such
CC physiological conditions, evaluating and/or monitoring the efficacy of
CC such therapies, and creating and identifying animal models of human
CC energy metabolism-related physiological conditions. An array is also
CC useful for defining expression signatures or profiles for mitochondrial
CC diseases, as well as distinguishing clinical disorders that result from
CC oxidative phosphorylation (OXPHOS) dysfunction, oxidative stress,
CC apoptosis and aging. An array of the invention contains probes of genes
CC not previously recognised to participate in mitochondrial biology. The
CC sequences shown in ADD33224-ADD35260 represent murine mitochondrial DNA
CC clones used to make the probes of the invention. Some sequences are not
CC present, these are SEQ ID NO's 295, 1174, 1213, 1700, 1728, 1730, 1905,
CC 1906, 2408 and 2643.

PT Determining the degree of cytosine methylation in genomic DNA, useful for
PT diagnosis and prognosis, comprises selective hybridization of amplicons
PT from chemically treated DNA.
XX
PS Claim 12; 56pp + Sequence Listing; 56pp; German.
XX
CC This invention describes a novel method for determining the degree of
CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a
CC genomic sample of DNA. The sample is treated chemically to convert
CC cytosine (C) but not methylated C, to uracil, then part of the genomic
CC DNA that contains the target C is amplified to form a labeled amplicon.
CC The amplicon is hybridised to two classes, each with at least one member,
CC of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the
CC degree of hybridisation to both classes is determined from the label on

CC the amplicon. From the ratio of labels hybridised to the two classes of
CC oligomers, the degree of methylation is calculated. The method is used:
CC (i) for diagnosis and/or prognosis of side effects of therapeutic drugs
CC and of a wide range of diseases, e.g. cancer, disorders of the central
CC nervous, cardiovascular, gastrointestinal and respiratory systems etc.,
CC particularly by detecting mutations or single nucleotide polymorphisms
CC (SNP's); and (ii) for differentiation of cell or tissue types and for
CC investigating cell differentiation. The method allows the methylation
CC status of many C residues to be determined simultaneously. ABQ13410-
CC ABQ54121 represent genomic DNA sequences used to illustrate the method
CC for determining the degree of cytosine methylation described in the
CC disclosure of the invention

PT New nucleic acids encoding human secreted proteins - obtained from cDNA
PT libraries prepared from kidney, fetal kidney, dystrophic muscle, muscle
PT and heart tissue.
XX
PS Claim 1; Page 319; 622pp; English.
XX
CC AAX40826 to AAX41093 represent 5' expressed sequence tags (ESTs) for
CC human secreted proteins, and encode the proteins given in AAY01602 and
CC AAY11994 to AAY12260, respectively. The proteins given represent the
CC signal peptide and an N-terminal fragment of a secreted protein. The
CC nucleic acid sequences can be used for producing secreted human gene
CC products. They can also be used to develop products for diagnosis and
CC therapy. The proteins obtained may have cytokine activity, cell
CC proliferation/differentiation activity, haematopoiesis regulating
CC activity, tissue growth regulating activity, reproductive hormone
CC regulating activity, chemotactic/chemokinetic activity, haemostatic and
CC thrombolytic activity, receptor/ligand activity, anti-inflammatory
CC activity, tumour inhibition activity or other activities. The products
CC can be used in forensic, gene therapy and chromosome mapping procedures.
CC The sequences can also be used for obtaining corresponding promoter
CC sequences. The nucleic acids encoding the signal peptide can be used for
CC directing extracellular secretion of a polypeptide or the insertion of a
CC polypeptide into a membrane, or importing a polypeptide into a cell

PT New oligonucleotide libraries comprising oligonucleotides which
PT selectively hybridize to mRNAs transcribed from a transcription unit of a
PT genome, useful for detecting tissue-, pathology-, and developmental-
PT specific genes.
XX
PS Example 1; SEQ ID NO 14608; 47pp; English.
XX
CC The present invention describes oligonucleotide libraries for detecting
CC messenger RNAs that populate a (sub-)transcriptome, where the (sub-
CC)transcriptome comprises messenger RNAs transcribed from multiple
CC transcription units that populate a genome. The library comprises several
CC oligonucleotides, each capable of hybridising selectively to a set of
CC messenger RNAs transcribed from a given transcription unit of the genome,
CC which encodes one or more messenger RNA splice variants. The
CC oligonucleotide libraries are useful for detecting mRNAs from a
CC biological sample, in expression profiling studies, in qualitatively or
CC quantitatively characterising the corresponding transcriptome, and in
CC detecting RNA transcripts and splice variants of human or animal
CC transcriptomes. The libraries may also be used as specialised mini
CC libraries to detect transcripts of a sub-transcriptome under a particular
CC biological or pathological state, and so allowing the detection of tissue
CC - and pathology-specific genes such as those genes only expressed in
CC specific tissue under a specific pathological condition; to detect
CC developmental specific genes; and to detect RNA transcripts and splice
CC variants of a transcriptome of a patient suffering from a particular
CC disorder. ABN27253 to ABN59589 represent oligonucleotide sequences from
CC rats, humans and mice, which are used in the exemplification of the
CC present invention. N.B. The sequence data for this patent did not form
CC part of the printed specification, but was obtained in electronic format
CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   New isolated polynucleotide and encoded polypeptides, useful in
PT   diagnostics, forensics, gene mapping, identification of mutations
PT   responsible for genetic disorders or other traits and to assess
PT   biodiversity.
XX
PS   Claim 1; SEQ ID NO 23304; 103pp; English.
XX
CC   The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC   sequences. (I) is useful as hybridisation probes, polymerase chain
CC   reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC   and in recombinant production of (II). The polynucleotides are also used
CC   in diagnostics as expressed sequence tags for identifying expressed
CC   genes. (I) is useful in gene therapy techniques to restore normal
CC   activity of (II) or to treat disease states involving (II). (II) is
CC   useful for generating antibodies against it, detecting or quantitating a
CC   polypeptide in tissue, as molecular weight markers and as a food
CC   supplement. (II) and its binding partners are useful in medical imaging
CC   of sites expressing (II). (I) and (II) are useful for treating disorders
CC   involving aberrant protein expression or biological activity. The
CC   polypeptide and polynucleotide sequences have applications in
CC   diagnostics, forensics, gene mapping, identification of mutations
CC   responsible for genetic disorders or other traits to assess biodiversity
CC   and to produce other types of data and products dependent on DNA and
CC   amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
CC   coding sequences of the invention. Note: The sequence data for this
CC   patent did not appear in the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

CC   The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC   sequences. (I) is useful as hybridisation probes, polymerase chain
CC   reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC   and in recombinant production of (II). The polynucleotides are also used
CC   in diagnostics as expressed sequence tags for identifying expressed
CC   genes. (I) is useful in gene therapy techniques to restore normal
CC   activity of (II) or to treat disease states involving (II). (II) is
CC   useful for generating antibodies against it, detecting or quantitating a
CC   polypeptide in tissue, as molecular weight markers and as a food
CC   supplement. (II) and its binding partners are useful in medical imaging
CC   of sites expressing (II). (I) and (II) are useful for treating disorders

PT   New isolated polynucleotide and encoded polypeptides, useful in
PT   diagnostics, forensics, gene mapping, identification of mutations
PT   responsible for genetic disorders or other traits and to assess
PT   biodiversity.
XX
PS   Claim 1; SEQ ID NO 18715; 103pp; English.
XX
CC   The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC   sequences. (I) is useful as hybridisation probes, polymerase chain
CC   reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC   and in recombinant production of (II). The polynucleotides are also used
CC   in diagnostics as expressed sequence tags for identifying expressed
CC   genes. (I) is useful in gene therapy techniques to restore normal
CC   activity of (II) or to treat disease states involving (II). (II) is
CC   useful for generating antibodies against it, detecting or quantitating a
CC   polypeptide in tissue, as molecular weight markers and as a food
CC   supplement. (II) and its binding partners are useful in medical imaging
CC   of sites expressing (II). (I) and (II) are useful for treating disorders
CC   involving aberrant protein expression or biological activity. The
CC   polypeptide and polynucleotide sequences have applications in
CC   diagnostics, forensics, gene mapping, identification of mutations
CC   responsible for genetic disorders or other traits to assess biodiversity
CC   and to produce other types of data and products dependent on DNA and
CC   amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
CC   coding sequences of the invention. Note: The sequence data for this
CC   patent did not appear in the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   New isolated polynucleotide and encoded polypeptides, useful in
PT   diagnostics, forensics, gene mapping, identification of mutations
PT   responsible for genetic disorders or other traits and to assess
PT   biodiversity.
XX
PS   Claim 1; SEQ ID NO 11800; 103pp; English.
XX
CC   The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC   sequences. (I) is useful as hybridisation probes, polymerase chain
CC   reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC   and in recombinant production of (II). The polynucleotides are also used
CC   in diagnostics as expressed sequence tags for identifying expressed
CC   genes. (I) is useful in gene therapy techniques to restore normal
CC   activity of (II) or to treat disease states involving (II). (II) is
CC   useful for generating antibodies against it, detecting or quantitating a
CC   polypeptide in tissue, as molecular weight markers and as a food
CC   supplement. (II) and its binding partners are useful in medical imaging
CC   of sites expressing (II). (I) and (II) are useful for treating disorders
CC   involving aberrant protein expression or biological activity. The
CC   polypeptide and polynucleotide sequences have applications in
CC   diagnostics, forensics, gene mapping, identification of mutations
CC   responsible for genetic disorders or other traits to assess biodiversity
CC   and to produce other types of data and products dependent on DNA and
CC   amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
CC   coding sequences of the invention. Note: The sequence data for this
CC   patent did not appear in the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Hepatic fibrosis disease markers comprising polynucleotides or
PT   antibodies, useful for improved diagnosis, screening and developing drugs
PT   to treat hepatitis, to control cirrhosis and carcinoma.
XX
PS   Claim 1; SEQ ID NO 173; 313pp; Japanese.
XX
CC   The present invention relates to hepatic-fibrosis disease markers
CC   (ADF90539-ADF90871) and related proteins (ADF90872-ADF90917). The
CC   sequences are useful for detecting and treating hepatic fibrosis caused
CC   by alcohol consumption, virus infection, etc., and the associated chronic
CC   hepatitis, etc. leading to liver cirrhosis and hepatic carcinoma. The
CC   markers allow the cause of hepatic fibrosis to be clarified (diagnostic
CC   precision), so more suitable treatments can be developed and given.

PT   New isolated chimpanzee nucleic acid sequence, useful for generating
PT   chimpanzee adenoviral vectors useful as vaccine carriers to elicit
PT   protective and/or therapeutic immune responses.
XX
PS   Claim 1; SEQ ID NO 1; 356pp; English.
XX
CC   The invention relates to an isolated chimpanzee nucleic acid sequence.
CC   The chimpanzee nucleic acid sequences are useful for generating
CC   chimpanzee adenoviral vectors in human E1-expressing cells lines, which
CC   are useful as vaccine carriers to elicit protective and/or therapeutic
CC   immune responses. The vaccines and pharmaceutical compositions are useful
CC   for the prevention and treatment of cancer. The chimpanzee nucleic acid
CC   sequences are also useful for boosting an antigen-specific immune
CC   response in a mammal, eliciting an immune response in a naive mammal,
CC   inducing an immune response against an antigen derived from an infectious
CC   agent, or breaking host tolerance to a self-antigen. The present sequence
CC   represents a chimpanzee adenovirus genomic DNA.

PT   Array containing probes for genes involved in mitochondrial biology,
PT   useful for determining mitochondrial biology gene expression profiles for
PT   use in diagnosing pathologies and identifying biochemical pathways.
XX
PS   Claim 2; SEQ ID NO 2223; 201pp; English.
XX
CC   The invention relates to a novel array comprising at least two isolated
CC   nucleotide molecules, each molecule having a sequence capable of uniquely
CC   hybridising to a nucleic acid molecule which is an expression product of
CC   a gene involved in mitochondrial biology. The array comprises two or more
CC   isolated nucleic acid molecules or spots, each molecule having a sequence
CC   chosen from sequence of 994 human probes and 2046 mouse probes. An array
CC   of the invention is useful for determining an expression profile of a
CC   mouse or human sample containing nucleic acid, by contacting the array
CC   with the sample under conditions allowing selective hybridisation, and
CC   measuring hybridisation of nucleic acid in the sample to the array to
CC   produce an expression profile. The array is also useful for determining
CC   an expression profile of a first labelled sample containing nucleic acid
CC   relative to a second, differently labelled sample containing nucleic
CC   acid. The second sample is a reference or a standard. An array is useful
CC   for determining an expression profile diagnostic of an energy-metabolism-
CC   related physiological condition. An array of the invention is useful for
CC   determining mitochondrial biology gene expression profiles of organisms,
CC   such as human, mice and closely related species, tissue and organs of
CC   such organisms, which are useful for determining expression profiles
CC   diagnostic of energy metabolism-related physiological conditions,
CC   diagnosing such physiological conditions, identifying biochemical
CC   pathways, genes, and mutations involved in such physiological conditions,
CC   identifying therapeutic agents useful for preventing and/or treating such
CC   physiological conditions, evaluating and/or monitoring the efficacy of
CC   such therapies, and creating and identifying animal models of human
CC   energy metabolism-related physiological conditions. An array is also
CC   useful for defining expression signatures or profiles for mitochondrial
CC   diseases, as well as distinguishing clinical disorders that result from
CC   oxidative phosphorylation (OXPHOS) dysfunction, oxidative stress,
CC   apoptosis and aging. An array of the invention contains probes of genes
CC   not previously recognised to participate in mitochondrial biology. The
CC   sequences shown in ADD33224-ADD35260 represent murine mitochondrial DNA
CC   clones used to make the probes of the invention. Some sequences are not
CC   present, these are SEQ ID NO's 295, 1174, 1213, 1700, 1728, 1730, 1905,
CC   1906, 2408 and 2643.

XX
CC The invention relates to a novel mouse apoptosis-associated protein
CC (AAB29693) and to nucleic acids encoding it (AAC81290). The mouse
CC apoptosis- associated protein potentiates the induction of Fas-mediated
CC apoptosis. The invention also relates to variants of the protein which
CC retain activity, recombinant vectors and host cells comprising DNA
CC encoding mouse apoptosis-associated protein, recombinant production of
CC the protein, an antibody which specifically binds the protein, and
CC methods of screening compounds for their ability to promote or inhibit
CC apoptosis induction. The invention additionally discloses Escherichia
CC coli SANK 70599 (FERM BP-6707) which contains a plasmid encoding mouse
CC apoptosis- associated protein. The mouse apoptosis-associated protein and
CC DNA encoding it may be used to screen potential apoptosis inhibitors and
CC promoters of apoptosis induction. The compounds thus identified can be
CC used in the treatment of diseases associated with abnormal Fas-mediated
CC apoptosis. The present sequence represents cDNA encoding mouse apoptosis-
CC associated protein

PT   Novel human transporter proteins and nucleic acids, useful for
PT   identifying modulators useful for treating disease or condition mediated
PT   by the protein.
XX
PS   Claim 4; Page 85; 96pp; English.
XX
CC   The invention relates to human transporter proteins and their
CC   corresponding nucleic acids. Human transporter peptide is useful for
CC   identifying a modulator that binds to transporter protein. It is used to
CC   raise antibodies or to elicit another immune response. It is also useful
CC   to provide a target for diagnosing a disease or predisposition to disease
CC   mediated by it. It is also useful in pharmacogenomic analysis. The
CC   antibodies of the invention is used to assess expression in disease
CC   states such as in active stages of the disease or in an individual with a
CC   predisposition toward disease related to the protein's function. They are
CC   also used to assess normal and aberrant subcellular localisation of cells
CC   in the various tissues in an organism, and for pharmacogenomic analysis,
CC   tissue typing and inhibiting protein function. The nucleic acid molecules
CC   of the invention are useful for monitoring the effectiveness of
CC   modulating compounds on the expression or activity of the transporter
CC   gene in clinical trials or in a treatment regimen, diagnostic assays for
CC   qualitative changes in transporter nucleic acid expression, and
CC   particularly in quantitative changes that lead to pathology. They are
CC   also used in gene therapy. Genetically engineered host cells comprising
CC   transporter DNA is used to produce non-human transgenic animals. The
CC   present sequence is human transporter protein encoding cDNA. Human
CC   transporter gene is located at chromosome 5

PT   New nucleic acid sequence encoding tramdorins, e.g. mouse tramd 1, mouse
PT   tramd 2, mouse tramd 3, human tramd 1, human tramd 2, human tramd 3 or
PT   rat tramd 1, useful for treating CNS, e.g. stroke, multiple sclerosis,
PT   trauma, neuropathic pain.
XX
PS   Claim 1; Fig 11; 177pp; English.
XX
CC   The present invention describes an isolated nucleic acid sequence
CC   comprising a cDNA sequence encoding mouse tramdorin (tramd) 2, mouse
CC   tramd 3, human tramd 1, human tramd 2, human tramd 3 or rat tramd 1, or
CC   the genomic sequence of mouse tramd 1 or mouse tramd 3. Mouse tramd 1 is
CC   located to chromosome 11, whereas human tramd 1 is located to chromosome
CC   5q31-33. The tramd sequences have neuroprotective, nootropic, analgesic
CC   and cerebroprotective activities, and can be used in gene therapy. The
CC   nucleic acid sequences are useful for diagnosing and treating central
CC   nervous system (CNS) disorders such as multiple sclerosis, nerve injury,
CC   neuropathic pain, stroke or trauma, and non-CNS disorders. The present
CC   sequence encodes human tramd 2, which is given in the exemplification of
CC   the present invention

PS   Claim 1; SEQ ID NO 1265; 2686pp; English.
XX
CC   This invention relates to novel, isolated full length human cDNA
CC   molecules and the encoded proteins thereof. Specifically, it refers to
CC   cDNA clones obtained by an oligo-capping method, where none of these
CC   clones are identical to any known human mRNAs. The present invention
CC   describes an immunoassay to identify agonists and antagonists, as well as
CC   antibodies, antisense molecules and siRNAs that can all be used to bind
CC   to and modulate expression of the cDNA molecules. As such, these
CC   molecules are useful for diagnostic markers or therapeutic targets for
CC   the various diseases or morbid states. In particular, they are useful in
CC   gene therapy for treating osteoporosis, neurological disease, Alzheimer's
CC   disease, Parkinson's disease, dementia, short memory and various cancers,
CC   as well as for maintaining equilibrium of sense or motor function, and
CC   for treating emotional reaction, fear response and panic. Accordingly,
CC   they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian,
CC   cytostatic and tranquiliser activities. This polynucleotide is a full
CC   length human cDNA sequence of the invention. NOTE: This sequence is not
CC   given in the sequence listing of the specification but can be obtained on
CC   CD-ROM from the European Patent Office, Vienna Sub-office.

PT   Novel 2495 cDNA, useful for treating osteoporosis, neurological diseases,
PT   Alzheimer's diseases, Parkinson's diseases, dementia and various cancers.
XX
PS   Claim 1; SEQ ID NO 4630; 2449pp; English.
XX
CC   The invention relates to 2495 novel polynucleotides (I) and their encoded
CC   polypeptides, sequences hybridizing to these nucleotides, sequences
CC   encoding partial polypeptides and sequences having 70% or 90% identity to
CC   the nucleotide and protein sequences. The nucleotides and polypeptides
CC   are useful as diagnostic markers or therapeutic target for the diseases
CC   or morbid states. They are also useful for treating osteoporosis,
CC   neurological diseases, Alzheimer's diseases, Parkinson's diseases,
CC   dementia and various cancers. This sequence corresponds to a nucleotide
CC   sequence of the invention.

PT   cancer), immune disorders, cardiovascular disorders and neurological
PT   diseases.
XX
PS   Claim 1; SEQ ID NO 1311; 2922pp; English.
XX
CC   The invention relates to 2175 novel human ovarian antigens (ABP41054-
CC   ABP43228) and to cDNAs encoding them (ABQ54131-ABQ56305), and also
CC   encompasses polypeptides 90% identical and polynucleotides 95% identical
CC   to the sequences of the invention. The invention additionally relates to
CC   recombinant vectors and host cells comprising human ovarian antigen
CC   polynucleotides, antibodies against human ovarian antigens, and the use
CC   of ovarian antigen polynucleotides and polypeptides in diagnosing,
CC   treating, prognosing or preventing various ovary and/or breast-related
CC   disorders. Such conditions include ovarian cancer and breast cancer, and
CC   metastatic tumours of ovarian or breast origin, reproductive system
CC   disorders (e.g., infertility, disorders of pregnancy, anovulation,
CC   polycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine
CC   disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic
CC   shock syndrome), inflammatory conditions (e.g., mastitis, oophoritis and
CC   vaginitis), immune disorders (e.g., congenital and acquired
CC   immunodeficiencies, autoimmune oophoritis, systemic lupus erythematosus),
CC   blood-related disorders (e.g., anaemia), cardiovascular disorders,
CC   respiratory disorders, neurological disorders, gastrointestinal disorders
CC   and urinary system disorders. Ovarian antigen polypeptides and
CC   polynucleotides may also be used in screening for compounds which
CC   modulate ovarian antigen expression or activity. The polynucleotides may
CC   further be used for gene therapy, chromosome mapping, in the
CC   identification of individuals and in forensic analysis, and the
CC   polypeptides may be used as food additives or to prepare antibodies
CC   useful in disease diagnosis, drug targeting and phenotyping. The present
CC   sequence represents cDNA encoding a human ovarian antigen of the
CC   invention. Note: The sequence data for this patent did not form part of
CC   the printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT colon.
XX
PS Claim 1; Page 61-62; 84pp; English.
XX
CC Then invention relates to a new combination comprising 55 cDNAs (ADA24485
CC -ADA24539)or their complements that are differentially regulated in an
CC adipose sample. Also included are detecting differential expression of
CC one or more cDNAs in a sample containing nucleic acids, screening several
CC molecules or compounds to identify a ligand that specifically binds a
CC cDNA, a vector comprising the cDNA, a host cell containing the vector,
CC producing a protein, screening several molecules or compounds, producing
CC an antibody and the isolated antibody. The cDNAs comprise sequences which
CC are upregulated or downregulated in response to peroxisome proliferator-
CC activated receptor gamma (PPARgamma) agonist. The combination comprising
CC several cDNAs is useful for preparing a composition for diagnosing or
CC treating diabetes mellitus, obesity, hypertension, atherosclerosis,
CC cancer of the breast, prostate or colon, or polycystic ovarian syndrome.

XX
CC The present sequence encodes an IGFBP5 polypeptide. It is used in the
CC method of the invention. The specification describes a method modulating
CC angiogenesis associated with wound healing, retinopathy, ischemia,
CC inflammation, microvasculopathy, bone healing, skin inflammation or
CC follicular development. The method comprises providing to a subject HOG3,
CC HOG8, HOG18, CA9, HXB, IGFBP5, HFARP, STC1, mig-6 or SSR4. The methods,
CC antisense polynucleotides, polypeptides and antibodies are useful for
CC treating wound healing, retinopathy, ischemia, inflammation,
CC microvasculopathy, bone healing, skin inflammation or follicular
CC development, or cancer such as breast, colon or lung cancer, or
CC glioblastoma

PT   Classifying a breast cancer patient according to prognosis comprises
PT   determining the similarity between the level of expression of each of
PT   five genes in a cell sample taken from patient, to control levels.
XX
PS   Disclosure; SEQ ID NO 390; 226pp; English.
XX
CC   The invention relates to a method of classifying a breast cancer patient
CC   according to prognosis by determining the similarity between the level of
CC   expression of each of five genes for which markers are listed in the
CC   specification, in a cell sample taken from the breast cancer patient, to
CC   control levels of expression for each respective five genes to obtain a
CC   patient similarity value. The methods are useful for classifying a breast
CC   cancer patient according to prognosis. Kits and computer program products
CC   are useful for data analysis using the diagnostic, prognostic and
CC   statistical methods of the invention. This sequence corresponds to a
CC   marker used in the method of the invention.

PT   New purified diaphanous-3 (DIAPH3) peptides and nucleic acids, useful as
PT   targets for screening assays designed to identify inhibitors or
PT   modulators of DIAPH3 activity, which are useful for treating breast
PT   cancer.
XX
PS   Disclosure; SEQ ID NO 76; 54pp; English.
XX
CC   This invention relates to a novel human diaphanous-3 (DIAPH3) protein and
CC   the encoding polynucleotide thereof. Specifically, it refers to the use
CC   of DIAPH3 cDNA in the prognosis of breast cancer, such that the DIAPH3
CC   protein can be used as a target for anti-cancer drugs or for the
CC   identification of molecules with anti-cancer activity. The present
CC   invention provides antibodies that specifically bind to the DIAPH3
CC   protein, as well as methods to identify an agent that modulates the
CC   binding of DIAPH3 to a binding partner. In particular it describes
CC   measuring the expression level of DIAPH3 using hybridization oligos and
CC   comparing this with a control expression level, where a raised expression
CC   level indicates a poor prognosis with respect to breast cancer. As such,
CC   it also provides small interfering RNA oligos that can hybridize to the
CC   DIAPH3 gene and inhibit expression thereof. The peptide and nucleic acid
CC   sequences of this invention are useful as markers to differentiate
CC   patients with a good prognosis from those with poor prognosis for breast
CC   cancer and are useful as targets for screening assays designed to
CC   identify inhibitors or modulators of DIAPH3 activity, which in turn are
CC   used for treating breast cancer. Accordingly, they can be used in gene
CC   therapy and exhibit cytostatic activity. This polynucleotide sequence is
```

```
CC   a human gene marker that when expression is upregulated in a patient
CC   sample it is correlated with a poor prognosis for breast cancer, given in
CC   an exemplification of the invention.

PT   New tumor-associated antigenic target polypeptides and nucleic acids,
PT   useful in preparing a medicament for treating or detecting a
PT   proliferative disorder, e.g. breast, lung, colorectal, ovarian or
PT   prostate cancer or tumor.
XX
PS   Claim 1; SEQ ID NO 960; 7273pp; English.
XX
CC   The invention relates to human tumour-associated antigenic target (TAT)
CC   polypeptides, and their related nucleic acids. The TAT polypeptides are
CC   overexpressed in cancer tissues compared to normal tissues, and may thus
CC   serve as effective targets for the diagnosis and treatment of cancer in
CC   mammals. The invention also relates to nucleic acid and polypeptide
CC   sequences at least 80% identical to the TAT nucleic acids and
CC   polypeptides; expression vectors and host cells comprising a TAT nucleic
CC   acid; an antibody specific for a TAT polypeptide; a peptide or organic
CC   molecule which binds to a TAT polypeptide; fusion proteins comprising a
CC   TAT polypeptide; and methods and compositions for the treatment or
CC   diagnosis of cancer in mammals. TAT polypeptides, nucleic acids,
CC   antibodies, antagonists, binding molecules and compositions are useful
CC   for diagnosing or treating a cell proliferative disorder associated with
CC   increased TAT expression, particularly cancers such as breast cancer,
CC   colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder
CC   cancer, pancreatic cancer, cervical cancer, cancers of the central
CC   nervous system, melanoma and leukaemia. TAT nucleic acids may further be
CC   used as hybridisation probes, in chromosome and gene mapping, in
CC   chromosome identification and in gene therapy. The present sequence
CC   represents a TAT nucleic acid of the invention

XX
CC This invention describes novel nucleic acid sequences that are highly
CC expressed in normal ovary tissue. Artificial chromosomes and cosmid
CC clones containing the sequences can be used as gene transfer vehicles.
CC The sequences can be used to produce DNA fragments containing full-length
CC genes. Host cells transformed with the sequences can be used to produce
CC polypeptides or polypeptide fragments, which can be used to screen phage
CC displays for polypeptides that bind to them, or as tools for identifying
CC agents active against ovarian cancer, or to prepare medicaments for
CC treating ovarian cancer. The cDNA sequences can be used to obtain genomic
CC genes, their promoters, enhancers, silencers, exon structures, intron
CC structures and their splice variants. AAZ41222-Z41324 represent cDNA
CC sequences derived from normal human ovarian tissue and which encode the
CC protein fragments represented in AAY59724-Y59837

PT New cDNAs, which are differentially expressed in (metastatic) breast
PT cancer useful for diagnosing or staging, breast cancer, or for monitoring
PT the treatment of breast cancer in an individual.
XX
PS Claim 1; SEQ ID NO 13; 30pp; English.
XX
CC The invention describes a combination of cDNAs (designated BC-cDNAs),
CC which are differentially expressed in breast cancer. The combination
CC includes 152 cDNA sequences, or their complements. The protein encoded by
CC any of these BC-cDNAs is useful for screening several molecules or
CC compounds to identify at least one ligand that specifically binds the
CC protein, producing or preparing polyclonal or monoclonal antibodies, or
CC purifying antibodies from a sample. The antibodies, which specifically
CC bind the protein differentially expressed in breast cancer is useful for
CC detecting the expression of a protein in a sample. The BC-cDNAs are also
CC useful for diagnosing, monitoring the treatment of, or staging, breast
CC cancer. This sequence represents a differentially expressed breast cancer
CC associated cDNA. Note: The sequence data for this patent did not form
CC part of the printed specification, but was obtained in electronic format
CC directly from the US patent office at
CC seqdata.uspto.gov/sequence.html?DocID=20020156263

PT Combination for diagnosing, staging, treating, or monitoring the
PT progression of treatment of a vascular disease, e.g. atherosclerosis,
PT comprises several cDNAs that are differentially expressed in activated
PT vascular tissue.
XX
PS Claim 1; Page; 18pp; English.
XX
CC This invention relates to a combination comprising several cDNAs that are
CC differentially expressed in activated vascular tissue. The invention also
CC discloses a high throughput method for detecting differentially expressed
CC cDNAs in a sample. The cDNAs of the invention may have
CC antiarteriosclerotic; cytostatic; cardiant; hypotensive; antidiabetic;
CC gynaecological; vasotropic and cerebroprotective activities and may be
CC used in gene therapy. The cDNAs of the invention may be used in a high-
CC throughput methods for detecting differential expression of one or more
CC cDNAs in a sample, or screening several molecules or compounds to
CC identify a molecule or compound that specifically binds a cDNA of the
CC invention. A protein encoded by the cDNA may be used to screen several
CC molecules or compounds to identify a ligand that specifically binds to
CC the protein, or to produce or purify an antibody to the protein that can
CC be used to detect a protein in a sample or purify a natural or
CC recombinant protein from a sample. The nucleotides may be useful for
CC diagnosing, staging, treating, or monitoring the progression of treatment
CC of a vascular disease, e.g. atherosclerosis, cancer, coronary artery
CC disease, hypertension, diabetes, pre-eclampsia, ischaemia- reperfusion
CC injury, restenosis, or stroke. The cDNAs can also be used for large-scale
CC genetic or gene expression analysis of several new nucleic acid
CC molecules. Antibodies to the proteins encoded by the cDNAs are useful for
CC diagnosing pre-pathologic disorders, and chronic or acute diseases
CC associated with abnormalities in the expression, amount or distribution
CC of the protein. The present sequence represents a cDNA of the invention
CC that is differentially expressed in activated vascular tissue. Note: The
CC sequence data for this patent did not form part of the specification, but
CC was obtained in electronic format directly from USPTO at
CC http.seqdata.uspto.gov/sequence.html?DocID=20020137081

PT   New genes regulated by MYCN activation, useful in gene therapy,
PT   particularly for treating a subject with e.g. neuroblastoma or other
PT   cancers, or for diagnosing, staging or monitoring the treatment of the
PT   cancer.
XX
PS   Claim 1; SEQ ID NO 152; 27pp; English.
XX
CC   This invention relates to novel isolated cDNAs that are differentially
CC   expressed in MYCN activated cells. Specifically, it refers to
CC   polynucleotide sequences that exhibit differential expression patterns in
CC   cells activated by the transactivator MYCN, where MYCN is a proto-
CC   oncogene that is amplified in neuroblastoma cells and is common in small
CC   cell lung cancers. The present invention describes these cDNA molecules
CC   as useful for in hybridisation assays to detect expression of nucleic
CC   acids (or complementary nucleic acids) in a present in a given sample, as
CC   well as for screening assays by identifying molecules or compounds that
CC   specifically bind the cDNA as a ligand and modulate function or activity.
CC   Accordingly, these compositions exhibit cytostatic activity and can also
CC   be used for gene therapy purposes. This polynucleotide sequence is a cDNA
CC   that is differentially expressed in MYCN activated cells, given in an
CC   exemplification of the invention. NOTE: This sequence does not appear in
CC   the printed specification but has been obtained in electronic format from
CC   the US Patent Office at
CC   ftp.seqdata.uspto.gov/sequence.html?DocID=20030119009.

PT   Analyzing proliferative diseases of breast cells, useful e.g. for
PT   diagnosis, prognosis and treatment of breast cancer, by determining
PT   methylation status of specific genes.
XX
PS   Claim 1; Page; 22pp; German.
XX
CC   This invention describes a novel method of analysing proliferative
CC   diseases of breast cells by determining the methylation status of certain
CC   genes. The invention also describes nucleic acids or their complements,
CC   oligomers, especially oligonucleotides or peptide nucleic acid oligomers,
CC   that hybridise to, or are identical with, any of the nucleic acids, the
CC   preparation of an oligomer array for analysing proliferative diseases of
CC   breast cells that are associated with the methylation status of CpG
CC   dinucleotides of the genes by bonding at least one oligomer to a solid
CC   phase and a kit comprising a bisulfite reagent and the oligomer. The
CC   nucleic acids are genomic sequences (5'- and/or regulatory and/or CpG-
CC   rich regions). The base sequence of the oligomer includes at least one
CC   CpG island, especially with C in the middle third of the sequence. The
CC   process involves a genomic DNA sample treated chemically, specifically
```

```
CC   with a bisulfite reagent, to convert non-methylated C to uracil or some
CC   other base having base-pairing properties different from those of C.
CC   Fragments of the treated DNA are then amplified, using primers and a
CC   polymerase and the methylation status of the genomic CpG dinucleotides is
CC   determined by analysis of the amplicons, particularly by hybridisation to
CC   the oligomer, optionally with extension of the hybridised oligomer by at
CC   least one base, or detection is by sequencing. The amplification may use
CC   methylation-specific primers. Alternatively, genomic DNA is extracted
CC   from a sample and digested with methylation-specific restriction enzymes,
CC   then the digestion fragments detected, optionally after amplification. In
CC   either method, more than 10 fragments of 100-200 bp are amplified in a
CC   single reaction vessel, using a heat-resistant DNA polymerase in PCR. The
CC   amplicons carry detectable markers, e.g. fluorophores, radioisotopes
CC   and/or releasable fragments of known mass that can be detected by mass
CC   spectrometry. The method is used for characterisation, classification,
CC   differentiation, staging, phase-estimation, diagnosis and/or therapy of
CC   proliferative diseases of breast cells. The method provides very specific
CC   classification of proliferative diseases, allowing better treatment. It
CC   can both characterise methylation status and detect single-nucleotide
CC   polymorphisms. This sequence represents human gene used to illustrate the
CC   method of the invention. NOTE: This sequence does not appear in the
CC   printed specification but has been retrieved from Genbank.

PT   Analyzing proliferative diseases of breast cells, useful e.g. for
PT   diagnosis, prognosis and treatment of breast cancer, by determining
PT   methylation status of specific genes.
XX
PS   Claim 1; Page; 22pp; German.
XX
CC   This invention describes a novel method of analysing proliferative
CC   diseases of breast cells by determining the methylation status of certain
CC   genes. The invention also describes nucleic acids or their complements,
CC   oligomers, especially oligonucleotides or peptide nucleic acid oligomers,
CC   that hybridise to, or are identical with, any of the nucleic acids, the
CC   preparation of an oligomer array for analysing proliferative diseases of
CC   breast cells that are associated with the methylation status of CpG
CC   dinucleotides of the genes by bonding at least one oligomer to a solid
CC   phase and a kit comprising a bisulfite reagent and the oligomer. The
CC   nucleic acids are genomic sequences (5'- and/or regulatory and/or CpG-
CC   rich regions). The base sequence of the oligomer includes at least one
CC   CpG island, especially with C in the middle third of the sequence. The
CC   process involves a genomic DNA sample treated chemically, specifically
CC   with a bisulfite reagent, to convert non-methylated C to uracil or some
CC   other base having base-pairing properties different from those of C.
CC   Fragments of the treated DNA are then amplified, using primers and a
CC   polymerase and the methylation status of the genomic CpG dinucleotides is
CC   determined by analysis of the amplicons, particularly by hybridisation to
CC   the oligomer, optionally with extension of the hybridised oligomer by at
CC   least one base, or detection is by sequencing. The amplification may use
CC   methylation-specific primers. Alternatively, genomic DNA is extracted
CC   from a sample and digested with methylation-specific restriction enzymes,
CC   then the digestion fragments detected, optionally after amplification. In
CC   either method, more than 10 fragments of 100-200 bp are amplified in a
CC   single reaction vessel, using a heat-resistant DNA polymerase in PCR. The
CC   amplicons carry detectable markers, e.g. fluorophores, radioisotopes
CC   and/or releasable fragments of known mass that can be detected by mass
CC   spectrometry. The method is used for characterisation, classification,
CC   differentiation, staging, phase-estimation, diagnosis and/or therapy of
CC   proliferative diseases of breast cells. The method provides very specific
CC   classification of proliferative diseases, allowing better treatment. It
CC   can both characterise methylation status and detect single-nucleotide
CC   polymorphisms. This sequence represents human gene used to illustrate the
CC   method of the invention. NOTE: This sequence does not appear in the
CC   printed specification but has been retrieved from Genbank.

PT   Determining the degree of cytosine methylation in genomic DNA, useful for
PT   diagnosis and prognosis, comprises selective hybridization of amplicons
PT   from chemically treated DNA.
XX
PS   Claim 12; 56pp + Sequence Listing; 56pp; German.
XX
CC   This invention describes a novel method for determining the degree of
CC   methylation of a particular cytosine in a motif 5'-CpG-3', present in a
CC   genomic sample of DNA. The sample is treated chemically to convert
CC   cytosine (C) but not methylated C, to uracil, then part of the genomic
CC   DNA that contains the target C is amplified to form a labeled amplicon.
CC   The amplicon is hybridised to two classes, each with at least one member,
CC   of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the
CC   degree of hybridisation to both classes is determined from the label on
CC   the amplicon. From the ratio of labels hybridised to the two classes of
CC   oligomers, the degree of methylation is calculated. The method is used:
CC   (i) for diagnosis and/or prognosis of side effects of therapeutic drugs
CC   and of a wide range of diseases, e.g. cancer, disorders of the central
CC   nervous, cardiovascular, gastrointestinal and respiratory systems etc.,
CC   particularly by detecting mutations or single nucleotide polymorphisms
CC   (SNP's); and (ii) for differentiation of cell or tissue types and for
CC   investigating cell differentiation. The method allows the methylation
CC   status of many C residues to be determined simultaneously. ABQ13410-
CC   ABQ54121 represent genomic DNA sequences used to illustrate the method
CC   for determining the degree of cytosine methylation described in the
CC   disclosure of the invention

CC   The invention relates to bacteriophage N4-coded virion RNA polymerase
CC   (vRNAP) and its nucleic acid. The nucleic acid is used to make an N4
CC   vRNAP which is useful: in the synthesis of RNAs of a desired sequence,
CC   RNAs for use as probes in hybridisation studies or Southern or Northern
CC   blot analysis, and RNA:DNA hybrids for nuclear magnetic resonance (NMR)
CC   structure determination; for in vitro studies of spliceosome assembly,
CC   splicing reactions and antisense experiments; for in vitro translation or
CC   microinjection; and for nucleic acid amplification. The present sequence
CC   is Bacteriophage N4 vRNAP DNA

PT Making a transcription product of a target nucleic acid sequence, for
PT diagnosing diseases in plants or animals, comprises admixing RNA
PT polymerase, single-stranded transcription substrate and nucleoside
PT triphosphates.
XX
PS Claim 5; SEQ ID NO 1; 265pp; English.
XX
CC The invention relates to a method of making a transcription product
CC corresponding to a target nucleic acid using an RNA polymerase that is
CC able to transcribe RNA using a single-stranded promoter and using a
CC single-stranded DNA template. The method involves: producing a single-
CC stranded transcription substrate by operably joining a single-stranded
CC target nucleic acid to a single-stranded promoter sequence that can be
CC bound by the RNA polymerase; and incubating the single-stranded
CC transcription substrate, RNA polymerase and nucleoside triphosphates
CC (NTPs) to allow synthesis of the transcription product. In certain
CC embodiments the single-stranded target nucleic acid corresponds to or is
CC complementary to a target nucleic acid in a sample, and in other
CC embodiments the single-stranded target nucleic acid encodes a hairpin RNA
CC such as a short interfering RNA (siRNA). The RNA polymerase used in the
CC invention is preferably the bacteriophage N4 virion RNA polymerase
CC (vRNAP) or functional deletion mutants thereof (referred to as mini-
CC vRNAPs). The invention also relates to a method for obtaining additional
CC rounds of synthesis of transcription product by reverse transcribing the
CC transcription product, joining the produced first-strand cDNA to a single
CC stranded promoter sequence to form a second transcription substrate, and
CC incubating the second transcription substrate with an RNA polymerase that
CC can use a single-stranded promoter. The invention additionally relates to
CC a method for producing hairpin RNAs using the method of the invention; a
CC cell comprising such a hairpin RNA; a method for attenuating expression
CC of a target gene in a cell; a method of cloning a target nucleic acid; a
CC method of constructing a nucleic acid library comprising clones of
CC substantially all nucleic acids or all mRNAs within a sample; a circular
CC single-stranded DNA molecule made using a method of the invention; host
CC cells comprising the circular single-stranded DNA;and a signalling system
CC for detecting and/or quantifying analytes. The methods are useful in
CC research, diagnostic and therapeutic applications, such as preparing cDNA
CC corresponding to mRNA, making sense or anti-sense probes, detecting gene
CC or organism-specific sequences, cloning, cell signalling, or making RNA
CC for use in RNA interference (RNAi). The methods are useful for making
CC transcription products (e.g., hairpin RNA) corresponding to a target
CC nucleic acid sequence to detect target nucleic acids in living cells. The
CC methods are also useful for diagnosing diseases in plants and animals
CC (including humans) and for testing products such as food, blood and
CC tissue cultures for contaminants. The methods are additionally useful for
CC detecting cellular nucleic acids in whole cells from a specimen, such as
CC a fixed or paraffin-embedded section, or from microorganisms immobilised
CC on a solid support such as replica-plated bacteria or yeast. The present
CC sequence represents a specifically claimed polynucleotide encoding a full
CC -length bacteriophage N4 virion RNA polymerase (vRNAP).

PS   Claim 35; SEQ ID NO 1; 296pp; English.
XX
CC   The invention relates to a novel method for detecting a target nucleic
CC   acid sequence which comprises contacting a linear single-stranded DNA
CC   target probe with a target nucleic acid sequence and incubating under
CC   hybridisation conditions such that the target-complementary sequences
CC   anneal adjacently to the target nucleic acid sequence to form a target
CC   probe-target complex and contacting the target probe-target complex with
CC   a ligase to form a transcription substrate. The method or kit of the
CC   invention may be useful for research or environmental and genetic
CC   screening, as well as for detection and quantification of a pathogen, an
CC   analyte, a gene or allele or a single nucleotide polymorphism (SNP) or
CC   other type of gene mutation or variant. The method and kit may also be
CC   utilised for diagnosing diseases in plants and animals, including humans
CC   and for testing products, such as food, blood, and tissue cultures for
CC   contaminants. The current sequence is that of the Bacteriophage N4 virion
CC   RNA polymerase (vRNAP) full-length DNA of the invention.

PT   Making a transcription product of a target nucleic acid sequence, for
PT   diagnosing diseases in plants or animals, comprises admixing RNA
PT   polymerase, single-stranded transcription substrate and nucleoside
PT   triphosphates.
XX
PS   Claim 5; SEQ ID NO 14; 265pp; English.
XX
CC   The invention relates to a method of making a transcription product
CC   corresponding to a target nucleic acid using an RNA polymerase that is
CC   able to transcribe RNA using a single-stranded promoter and using a
CC   single-stranded DNA template. The method involves: producing a single-
CC   stranded transcription substrate by operably joining a single-stranded
CC   target nucleic acid to a single-stranded promoter sequence that can be
CC   bound by the RNA polymerase; and incubating the single-stranded
CC   transcription substrate, RNA polymerase and nucleoside triphosphates
CC   (NTPs) to allow synthesis of the transcription product. In certain
CC   embodiments the single-stranded target nucleic acid corresponds to or is
CC   complementary to a target nucleic acid in a sample, and in other
CC   embodiments the single-stranded target nucleic acid encodes a hairpin RNA
CC   such as a short interfering RNA (siRNA). The RNA polymerase used in the
CC   invention is preferably the bacteriophage N4 virion RNA polymerase
CC   (vRNAP) or functional deletion mutants thereof (referred to as mini-
CC   vRNAPs). The invention also relates to a method for obtaining additional
CC   rounds of synthesis of transcription product by reverse transcribing the
CC   transcription product, joining the produced first-strand cDNA to a single
CC   stranded promoter sequence to form a second transcription substrate, and
CC   incubating the second transcription substrate with an RNA polymerase that
CC   can use a single-stranded promoter. The invention additionally relates to
CC   a method for producing hairpin RNAs using the method of the invention; a
CC   cell comprising such a hairpin RNA; a method for attenuating expression
CC   of a target gene in a cell; a method of cloning a target nucleic acid; a
CC   method of constructing a nucleic acid library comprising clones of
CC   substantially all nucleic acids or all mRNAs within a sample; a circular
CC   single-stranded DNA molecule made using a method of the invention; host
```

```
CC   cells comprising the circular single-stranded DNA;and a signalling system
CC   for detecting and/or quantifying analytes. The methods are useful in
CC   research, diagnostic and therapeutic applications, such as preparing cDNA
CC   corresponding to mRNA, making sense or anti-sense probes, detecting gene
CC   or organism-specific sequences, cloning, cell signalling, or making RNA
CC   for use in RNA interference (RNAi). The methods are useful for making
CC   transcription products (e.g., hairpin RNA) corresponding to a target
CC   nucleic acid sequence to detect target nucleic acids in living cells. The
CC   methods are also useful for diagnosing diseases in plants and animals
CC   (including humans) and for testing products such as food, blood and
CC   tissue cultures for contaminants. The methods are additionally useful for
CC   detecting cellular nucleic acids in whole cells from a specimen, such as
CC   a fixed or paraffin-embedded section, or from microorganisms immobilised
CC   on a solid support such as replica-plated bacteria or yeast. The present
CC   sequence represents a specifically claimed polynucleotide encoding a full
CC   -length bacteriophage N4 virion RNA polymerase (vRNAP) which contains an
CC   N-terminal His-tag.

PT   Detecting a target nucleic acid sequence, useful for diagnosing diseases
PT   in plants and animals, comprises contacting target probes with a target
PT   nucleic acid sequence and incubating under hybridization conditions.
XX
PS   Claim 35; SEQ ID NO 14; 296pp; English.
XX
CC   The invention relates to a novel method for detecting a target nucleic
CC   acid sequence which comprises contacting a linear single-stranded DNA
CC   target probe with a target nucleic acid sequence and incubating under
CC   hybridisation conditions such that the target-complementary sequences
CC   anneal adjacently to the target nucleic acid sequence to form a target
CC   probe-target complex and contacting the target probe-target complex with
CC   a ligase to form a transcription substrate. The method or kit of the
CC   invention may be useful for research or environmental and genetic
CC   screening, as well as for detection and quantification of a pathogen, an
CC   analyte, a gene or allele or a single nucleotide polymorphism (SNP) or
CC   other type of gene mutation or variant. The method and kit may also be
CC   utilised for diagnosing diseases in plants and animals, including humans
CC   and for testing products, such as food, blood, and tissue cultures for
CC   contaminants. The current sequence is that of the Bacteriophage N4 virion
CC   RNA polymerase (vRNAP) full-length DNA with a purification-related His
CC   tag of the invention.

PT   Novel genes derived from Ciona intestinalis (sea squirt), expressed in
PT   nervous system in the tailbud embryo or larva, useful for studying the
PT   development of nervous system.
XX
PS   Claim 2; SEQ ID NO 25; 897pp; Japanese.
XX
CC   This invention relates to a novel gene cluster, where the encoded
CC   proteins are expressed in the nervous system of sea-squirt tailbud embryo
CC   or larva. The invention is useful for studying the development of the
CC   nervous system of the sea-squirt and for research purposes. The genes may
CC   be used for determining the disease-development mechanisms in the nervous
CC   system. In addition, novel gene clusters expressed in nervous system of
CC   sea-squirt tailbud embryo or larva allows development of diagnostics and
CC   therapeutics related to nervous system diseases. The present sequence is
CC   that of a C intestinalis gene of the invention.

PT   New NtcCBP polypeptides, used to produce transgenic plants which are
PT   resistant to metal cations, or which can be used for phytoremediation of
PT   areas contaminated with metal cations.
XX
PS   Claim 26; Page 113-114; 129pp; English.
XX
CC   The invention provides plant derived calcium-dependent calmodulin-binding
CC   polypeptides (CBP) and polynucleotides encoding the CBPs. The CBPs can be
CC   used for producing transgenic plants capable of surviving in areas of
CC   high metal cation concentration, without taking up dangerous quantities
CC   of the cations, or capable of phytoremediation of an area contaminated
CC   with metal cations. The transgenic plants assist agriculture as they can
CC   be grown in areas contaminated with metal cations, without becoming
CC   toxic. The present sequence represents a cDNA encoding a A. thaliana
CC   AtCNGC1 polypeptide

PT   New isolated polynucleotide and encoded polypeptides, useful in
PT   diagnostics, forensics, gene mapping, identification of mutations
PT   responsible for genetic disorders or other traits and to assess
PT   biodiversity.
XX
PS   Claim 1; SEQ ID NO 8911; 103pp; English.
XX
CC   The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC   sequences. (I) is useful as hybridisation probes, polymerase chain
CC   reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC   and in recombinant production of (II). The polynucleotides are also used
CC   in diagnostics as expressed sequence tags for identifying expressed
CC   genes. (I) is useful in gene therapy techniques to restore normal
CC   activity of (II) or to treat disease states involving (II). (II) is
CC   useful for generating antibodies against it, detecting or quantitating a
CC   polypeptide in tissue, as molecular weight markers and as a food
CC   supplement. (II) and its binding partners are useful in medical imaging
CC   of sites expressing (II). (I) and (II) are useful for treating disorders
CC   involving aberrant protein expression or biological activity. The
CC   polypeptide and polynucleotide sequences have applications in
```

```
CC   diagnostics, forensics, gene mapping, identification of mutations
CC   responsible for genetic disorders or other traits to assess biodiversity
CC   and to produce other types of data and products dependent on DNA and
CC   amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
CC   coding sequences of the invention. Note: The sequence data for this
CC   patent did not appear in the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Improving disease resistance, controlling cell death or reducing
PT   hypersensitive response to pathogen attack in plants, involves
PT   downregulating or inactivating cyclic nucleotide gated ion channel gene
PT   or gene product.
XX
PS   Claim 11; Fig 14; 91pp; English.
XX
CC   The present sequence is the coding sequence for AtCNGC1/DND2 from
CC   Arabidopsis thaliana. AtCNGC1 is "cyclic nucleotide-gated ion channel",
CC   and DND is "defence, no death". Manipulation of AtCNGC1/DND2 gene (i.e.
CC   downregulating, mutating or inactivating) allows generation of plants
CC   with improved disease resistance. AtCNGC1/DND2 can be used for reducing
CC   hypersensitive response (HR) to a pathogen attack in a plant, controlling
CC   cell death and improving resistance in a plant against a disease caused
CC   by virus such as nepovirus including tobacco ringspot virus, a bacteria
CC   such as a gram-negative bacterium e.g. bacteria of the genus Pseudomonas
CC   or Xanthorionas, including P. syringae pv.tomato and Xanthomonas
CC   campestris pv.campestris and a fungi such as an ascomycete fungus
CC   including fungi of genus Erysiphe e.g. E. orontii. The DND2 gene maps to
CC   the lower arm of Arabidopsis chromosome 5 (close to markers nga129 and
CC   LFY3)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
